

ACCTROL™ Access Control Solutions for Public Safety

Specializing in Developing and Integrating Video, Audio and Access Control in Public Safety Applications Where Cable and Wireless Will Not Work

ACCTROL™

Access Control Solutions on a Power Line LAN

ACCTROL™ Powered by CyGOS™ Turns Existing Power Lines into LANs

Our exclusive patent pending CyGOS™ system is designed to transform commercial/industrial power lines into LANs that can transmit data, video and audio signals. CyGOS™ makes it possible for us to build and integrate unique access control solutions for doors, gates and windows.

Enables Access Control in Locations Where Cable and Wireless Will Not Work

We enable detection and surveillance equipment to be deployed in locations where installing cable is physically and/or cost prohibitive, and a wireless application is restricted by line-of site limitations.

Comprehensive Video and Audio Surveillance Solutions with Remote Access Control

CyGOS™ powered access control solutions from Cyber Group can cost effectively deliver control, video and audio in gated locations others cannot. The CyGOS™ applications are cost effective and easy to use.

Eliminates the Need for Cables or Wireless

Using existing power lines as a LAN eliminates the high cost of laying new cables or wireless.

Total Integration as a Stand Alone Application or Integration with an Existing Surveillance System/Network

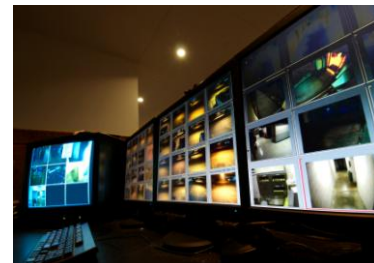

Any CyGOS™ powered access control application can be configured as a stand-alone system or integrated as part of a network. Our custom solutions can be uniquely designed to work easily with existing applications. And they can transmit data anywhere there are power lines.

Customized Solutions for a Wide Range of Applications

Cyber Group provides a wide range of customized access control and surveillance solutions for a number of different public safety, local government and business organizations.

Typical Installations Include:

- Law Enforcement Facilities
- Fire Stations
- 911 Centers
- Correctional Facilities
- Schools
- Industrial
- Warehouse-Distribution
- Retail

We have a staff of more than 50 engineers with extensive experience in designing, developing and implementing custom software, systems and hardware solutions in a number of industries. Our team is led by former senior level Texas Instruments engineering leaders involved in delivering major military systems, public safety products and technology solutions.
