

Engineering Solutions for Public Safety Applications

Since 1998 Cyber Group has Developed and Implemented a Wide Range of Technology Solutions in Public Safety, Industrial Automation and Energy Management

Founded by Former Senior-Level Texas Instruments Engineers

Today, the company has one of the best software and hardware engineering teams in the world. Its corporate headquarters is located in Dallas and it has more than 50 engineers on staff. The Cyber Group team has a comprehensive portfolio of software, hardware, implementation and successful consulting projects.

We have built an outstanding reputation for creating custom solutions, highest quality and delivering on time and in budget for its customers.

Public Safety, Industrial Automation and Energy Industry Applications

We specialize in the development of software and hardware, as well as their implementation, for public safety, industrial automation and energy management applications. Public Safety is a key focus including law enforcement, fire-rescue, loss prevention and homeland security.

Software Development and System Integration Solutions

We have extensive experience in the development, re-engineering, deployment and maintenance of software products and solutions. Our development and delivery model delivers speed, quality and cost savings for our clients.

Hardware Design and Development Services

We have extensive experience in the development of hardware and embedded electronic control products that are stand-alone or part of a total technology solution. In addition, we specialize in engineering hardware and software solutions for new designs, upgrades, and redesigns.

Comprehensive Consulting Services for Optimizing Business and Technology

Cyber Group provides a wide range of customized consulting services solutions for its customers. Typical engagements include:

- Overall Technology Consulting Services in Software, Hardware and Implementation
- Customized New Product and Solution Due Diligence
- New Technology Planning
- Comprehensive Outsourced Project Management
- Process Improvement and Optimization with New Automation Tools
- Evaluation of Existing Engineering and Development Teams / Processes
- Product and Solution Assessments
